

PLATINUM SOIL

Platinum Soil is an active substrate soil for aquarium with granular and porous structure made in Japan.

The substrate regulates parameters of the aquarium water by lowering the value of the parameters *pH*, *GH* and *KH*. It creates a soft, slightly acidic water, ideal for shrimp, freshwater fish and plants. Well suited as a substrate for shrimp breeding.

Contains large amounts of nutrients are released gradually and ensure sustainable growth for even the most demanding plants.

This will provide excellent nutrient for plant growth.

The porous structure of the substrate makes it an excellent habitat for nitrifying bacteria.

Water will clear up with 24hours of usage

日本製
MADE IN JAPAN

Type of soil available:

There is 2 type of soil , BLACK or BROWN

For each type of soil, there is 2 grain size , POWDER and SUPER powder

Black powder
(Black 2.0mm ~ 3.0mm)

Black super powder
(Black 1.0mm ~ 2.0mm)

Brown powder
(Brown 2.0mm ~ 3.0mm)

Brown super powder
(Brown 1.0mm ~ 2.0mm)

PRICE for BLACK and BROWN soil

MODEL	POWDER	SUPER POWDER
1L	\$6.50	\$6.50
3L	\$15	\$15
8L	\$34	\$34

Usage:

Do not rinse the substrate prior to use. Moisten the substrate before planting plants and laying arrangement. Fill the tank. After pouring water tank may be cloudy. The turbidity should disappear after a few hours with an efficient filtration.

Recommended quantities of substrate:

Aquarium 35 liters of 6 - 8 liters of soil

Aquarium 57 liters of 8 - 11 liters of soil

Aquarium 157 liters of 24 - 32 liters of soil
